Exhibit Omeka S page style sheets

Headings
Screen readers use headings to identify the content hierarchy in a webpage. Think of website headings like a book.

1. Heading 1 is used for the Title of the entire website. Like the title of a book.
2. Heading 2 is used for each webpage heading in the website. Like title of a chapter in a book.
3. Heading 3 is used for the heading/s of HTML blocks that break up the chunks of content in a webpage. Like title of a section in a chapter of a book.
4. Heading 4 is used for a subtitle heading within a HTML block. Like titles of paragraphs within a section in a chapter of a book.
